ATOS Testing Task

Aya Ghazy
ATOS

Challenge Requirements:

1- Go to this URL (https://www.phptravels.net/register) to register new user
2- Enter first Name which must start with capital letter
3- Enter last Name which must start with capital letter and can't be equal First Name
4- Enter valid Gmail
5- Enter valid password and check it must have capital letter, small letter, special character and there is no limit for password
6- Email should be unique for every user
7- After click Submit, Check verification mail sent
8- Click on verification link on Verification Mail sent
9- Verify user login correctly

Note: All Fields are mandatory

Deliverables:

1- Indicate what is in Scope and what is Out of scope
2- Write test cases and bug report for these requirement
3- Assume any missing data and report your assumption.
4- Write automation script using any language and any test tool to automate Main Test Cases (5 scenarios at least) assuming any missing data

- Document your work.

- Nothing should be hard-coded in the scripts:

- Customized reports including screenshots for failures are preferred.

- Report Assertion failures and other exceptions properly in the execution report

- Recover from Assertion failures and other exceptions by closing the browser window, terminating test execution, and generating the report accordingly.

- Cross Platform scripts should work on mac, windows and Linux

- Implement a Hybrid (Modular *reusable methods* and Data-driven) Test Automation Framework with an Object-Oriented Design.

5- Report any missing data either in UI or requirement in should be added

Challenge Completion Self-Evaluation:

After you complete the challenge you should do as follows:

1.   Upload the solution (including one or more execution reports) to an online sharing service and provided us with a publicly accessible link.

2.   Create a short description (or drawings) to tell us how your solution works, its components, features, and any limitations.
